Make Applications More Valuable

Embed Ensemble. Make vintage applications richer, without rewriting.

When you embed Ensemble in your applications, they become more valuable. Ensemble-enriched applications can connect with multiple systems and processes. And you'll be able to rapidly enhance your existing applications – without rewriting them – by adding rich Web interfaces, adaptable workflow, rules-based business processes, and other new features. Ensemble is the easiest integration software to use because it's not a stitched-together suite of separate parts. We created it as a single, architecturally consistent technology stack (integration server, data server, application server, and portal development software). So Ensemble projects are typically completed in half the time required with previous generations of integration products. Embed our innovations, enrich your applications.
